Product Carbon Footprint Report

ASUS Zenbook 14 OLED UX3405C
(Series: BX3405C, RX3405C)

Report produced:November,2024

Esimated carbon footprint

230 Kg CO_2e ± 36 Kg CO_2e

Product Introduction & Assumptions for calculating product carbon footprint:

Product Weight	Screen Size	Product Life
1.2 kg	14 inch	4 years
Assembly Location	**Use Location**	**Use Energy Demand (Year TEC)**
China	United States	15.07 kWh/year

WHY WE DO

ASUS is committed to continuously improving the environmental performance of the products you purchase. Through product carbon footprint reports (PCF), we show the environmental impact of product lifecycles from design to disposal.
HOW WE CONDUCT

Product Carbon Footprint (PCF) is calculated using PAIA (Product Attribute to Impact Algorithm), PAIA tool is a streamlined Life-cycle assessment (LCA) tool developed by MIT's Material System Laboratory and methodology was following IEC TR 62921:2016. Throughout the entire life cycle of a product, and the assessment includes the contributions material extraction, manufacturing, packaging and ship, use and end-of-life management.

WHAT WE PRESENT

There are many variety factors including the device configuration influence the result of product carbon footprint. ASUS show the 5th and 95th percentile value and the means GHG result included standard deviation of carbon footprint estimate to reflect that uncertainty. For this product, the show the 5th and 95th percentile of carbon footprint estimate, 146 Kg CO2e and 439 Kg CO2e, and that estimate has a mean of 230 Kg CO2e and standard deviation of 36 Kg CO2e.

This product's estimated carbon footprin by Lifecycle:

9.9% Use
6.0% Transport
84.0% Manufacturing
0.1% End-of-Life Management
Life Cycle Assessment

21% Display
20% SSD
20% Mainboard
14% Power Supply
4% Chassis
3% Battery

About the data

Methodology

Estimated emissions are calculated using PAIA Notebook Tool Version 1.4.0, copyright by the ICT Benchmarkgin collarboration inculding the Massachusetts Institue of Technology's Material Systems Laboratory and partners. Results shownn here are subjuect to changed as the tool is updated.

Modular design:
90% materials and parts are easy to recycle and reuse in waste treatment plants
